

## **Postdoc Position to study Multitrophic Interactions in Agricultural Systems**

A 1.5 years postdoc position is available to study the ecology of multitrophic interactions in the Mesoamerican traditional agricultural system known as the Milpa, comprising beans, squash and maize plants. The research project will focus on the role of host-plants as mediators of interactions between above and belowground herbivores and their natural enemies. Project involves lab and greenhouse work in Switzerland.

Qualifications: We are looking for a highly motivated scientist with some background in any of the following fields of research: insect-plant interactions, three trophic level interactions, chemical ecology, and/or evolutionary biology.

Starting date: as early as February 1, 2021

For information on our research group visit:
