

# IBIOL EXTERNAL SEMINAR

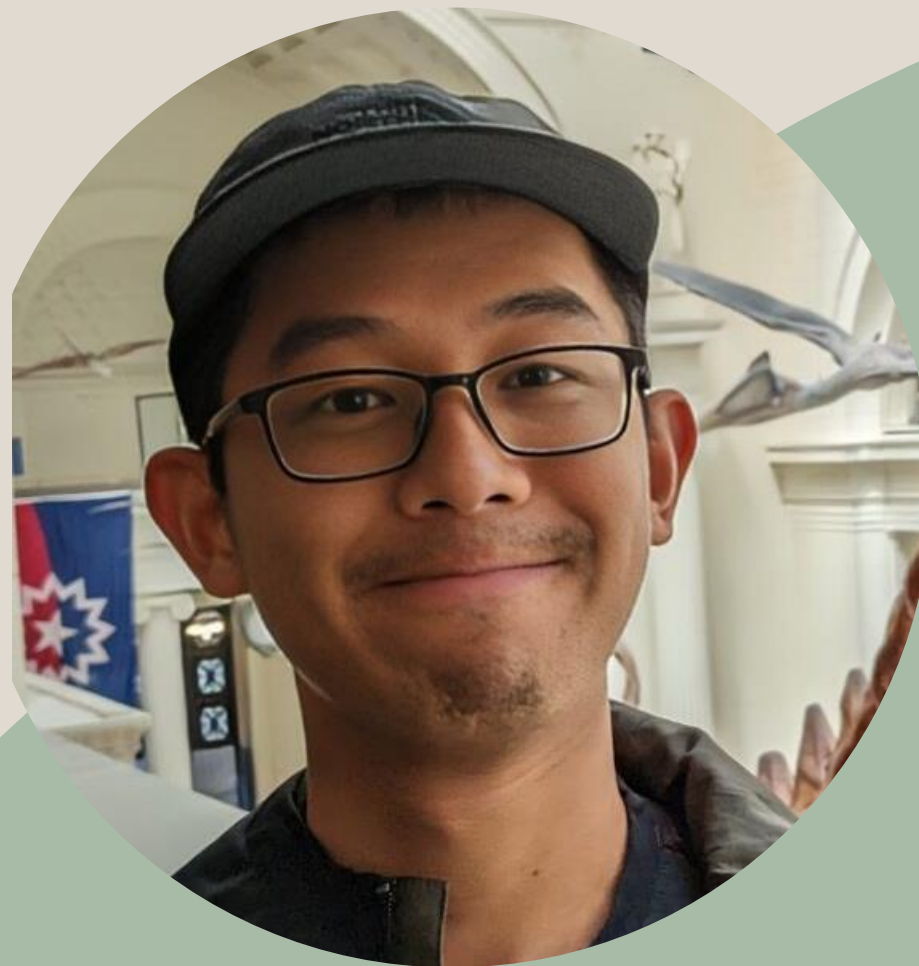

**22 MAY 2025**

12:15–13:15

ROOM F 200

Chuliang Song

**Uni California, Los Angeles**

## **Understanding Ecological Dynamics with Incomplete Information**

A central quest in ecological research is to understand the ecological dynamics maintaining biodiversity. However, when making strong and robust assessments of ecological dynamics, we very rarely possess complete information about the entire ecological system. This talk will address this challenge and shows how carefully designed theory allows rigorous extrapolation and prediction from limited data.
