

IBIOL EXTERNAL SEMINAR

20 February 2025

12:15–13:15

ROOM F-200

Sandra A. Binning
University of Montreal

Hitching a ride: Incorporating infection into our understanding of animal movement and performance

The Binning lab studies how environmental stressors—like low oxygen, parasites, temperature, and pH—affect aquatic organisms. The focus is on behavior, morphology, and physiology, especially movement. Using respirometry, video tracking, biologgers, and fieldwork, the lab explore intraspecific variation across marine and freshwater systems.
