

5-day Microfluidics Course

Experimental Microfluidics: a Short Course

Hybrid format, 12-16 June 2023

In this 5-day course, you can learn the basics of microfluidic technology and sample a range of applications in microbiology and chemistry, all through the presentation of experiments and recorded demos. Topics will cover fluid transport at small scales, design, and fabrication of microfluidic devices, set up of a typical microfluidic experiment, flow visualization, image acquisition and analysis, and ‘troubleshooting at the microscale’.

The course will take place at ETH Zurich, D-BAUG.

Code:102-1248-00L, 1 ECTS Credit
