Education: Fundamental human right or strategic tool in support of economic growth? To what extent can this tension be defused? How does commodity-dependence influence education policy and practice? What is the role of vocational training vis-à-vis university education in developing countries? Are MOOCs and Chinese cooperation a game changer for higher education in Africa? And how does student migration sit vis-à-vis the globalisation of knowledge?

These and other questions lie at the heart of *Education, Learning, Training: Critical Issues for Development*, a collection of essays edited by Gilles Carbonnier, Michel Carton and Kenneth King, which explore 50 years of international discourse surrounding education and development. Drawing on examples from Africa, Asia and Latin America, the chapters examine issues hitherto largely neglected, but of increasing relevance to researchers and policymakers.
